About Chen Hsong

Chen Hsong, established in 1958, is one of the largest manufacturers of injection moulding machines in the world, with annual sales exceeding 20,000 sets.

For over 65 years, Chen Hsong sold to more than 85 countries across the globe, supplying injection moulding machines with clamping force from 20 tons to 6,500 tons. In 1991, Chen Hsong became listed on the Hong Kong Stock Exchange (stock code: 00057). Headquartered in Hong Kong, Chen Hsong operates numerous manufacturing and research facilities in China, including Shenzhen, Shunde, Ningbo and Taiwan, as well as in Japan.

Since 2011 when Chen Hsong and Mitsubishi Plastics Technology of Japan entered into a worldwide strategic partnership, Chen Hsong has been progressively upgrading its internal management, production and quality systems with industry best practices, including TPS (lean manufacturing), M-System (Mitsubishi quality system) and a Japanese “perfect quality” focus towards all R&D, procurement and production activities. For over a decade since then, and leveraging its superior supply chain and production capabilities, Chen Hsong also supplied Mitsubishi, as OEM, with world-renowned “MMX” large-tonnage two-platen injection moulding machines (up to 3,500 tons).

To provide customers with even better peace-of-mind, Chen Hsong insists on being the only fully vertically-integrated maker of injection moulding machines globally, starting from basic ductile iron casting to high-end fabrication and machining, and all major production steps until the completed assembly of each machine. Only through absolute control of each fine step of the manufacturing process would customers be best served with professionalism, quality and perfection.

DM III

Your Professional Multi-Mat Solution

The DM III is the third iteration of Chen Hsong's DM-series of multi-material injection moulding machines – a product line with a long and vibrant history. This new, third generation contains modularised upgrades on most technical aspects of the successful DM-series, giving it more power, larger specs, higher speed, better precision, more stability, higher reliability, easier operation and more versatility than ever before.

Professional Solution for Multi-Mat

Uniquely addresses industry pain points

Gather the world's top technical talents

High-end technology from Mitsubishi partnership

Best-practice lean manufacturing processes

Gen I

1997: DM I launched – the first turntable multi-mat product line

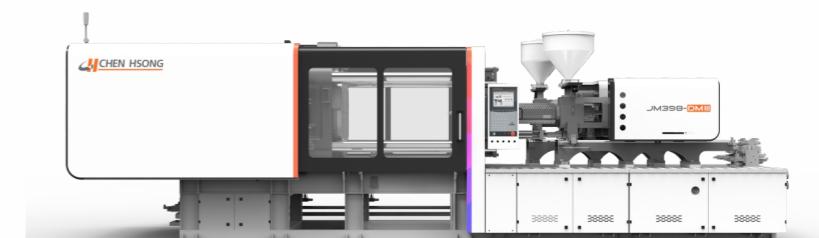

Gen II

2011: DM II – upgraded with servo-driven precision

Gen III

2022: DM III – advanced all-digital control systems

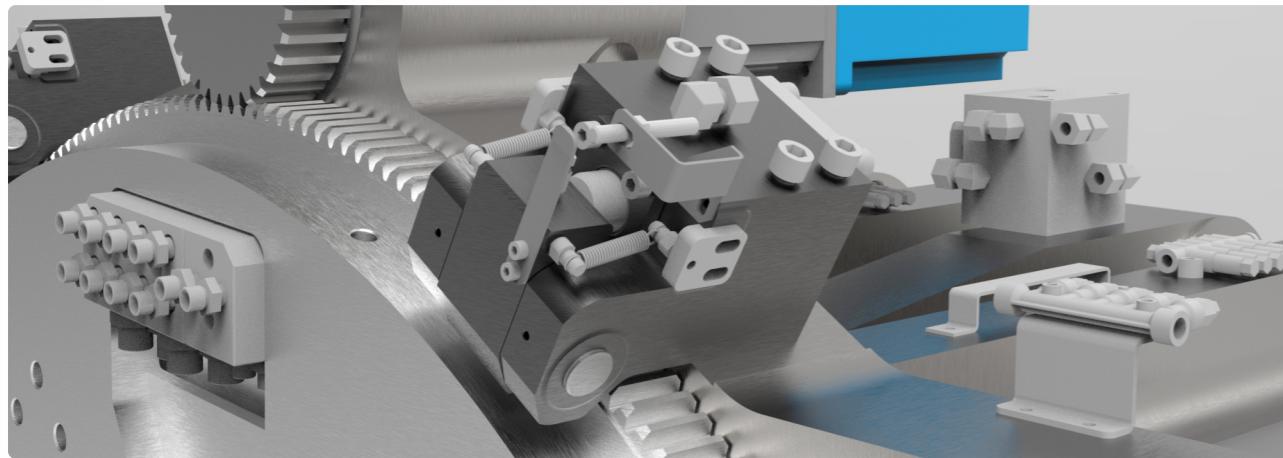

65 years of focusing on nothing but injection moulding technology – professionalism and technical capabilities you can trust.

Stability At The Core

Four core patented technologies

01 Patented Turntable Tightening Mechanism

Oversized and heavy moulds are particularly threatening to the turntable mechanism because of the additional stresses they caused, if not appropriately and efficiently compensated by advanced dynamic adaptive technology such as in the DM III which effectively enhances part quality and mould protection as well as preserves turntable precision.

JM168-DM III, JM268-DM III: 2 sets

JM398-DM III, JM568-DM III: 4 sets

02 Patented Turntable Support Mechanism

Under normal operations, the turntable of a multi-mat machine is under constant downward stress from the weight of the moulds, which always threatens to increase friction to turntable components, increasing wear and reducing precision over time, unless alleviated by proprietary support structures such as in the DM III.

	DM III	Competition A	Competition B
Support Mechanism	Integrated with adjustments	Separated pieces	Single-point
Pros/Cons	Easy adjustment, no loosening, higher yields	Difficult to adjust, easy for misalignment	Difficult to adjust, easy for misalignment

03 Patented Turntable Ejection Mechanism

The turntable, when rotating, is separated from the moving platen using a proprietary mechanism for friction-free motion, greatly extending usage life and maintaining mechanical precision.

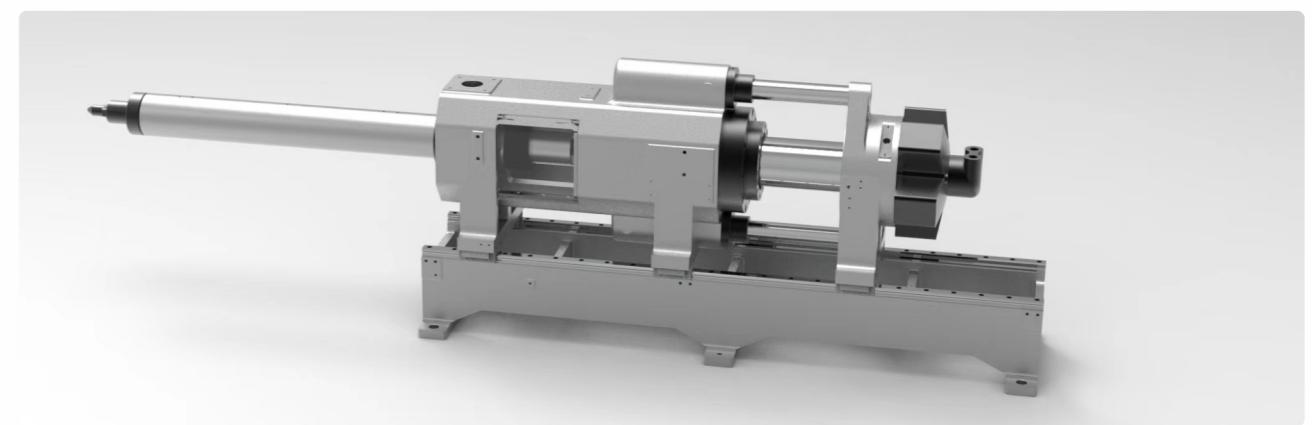

Proprietary technology that works:

1. Simple design; easy maintenance
2. Even stress distribution during ejection preserves turntable precision
3. Low friction, long usage life
4. High positional precision for higher part yields

04 Patented Injection Relief Mechanism

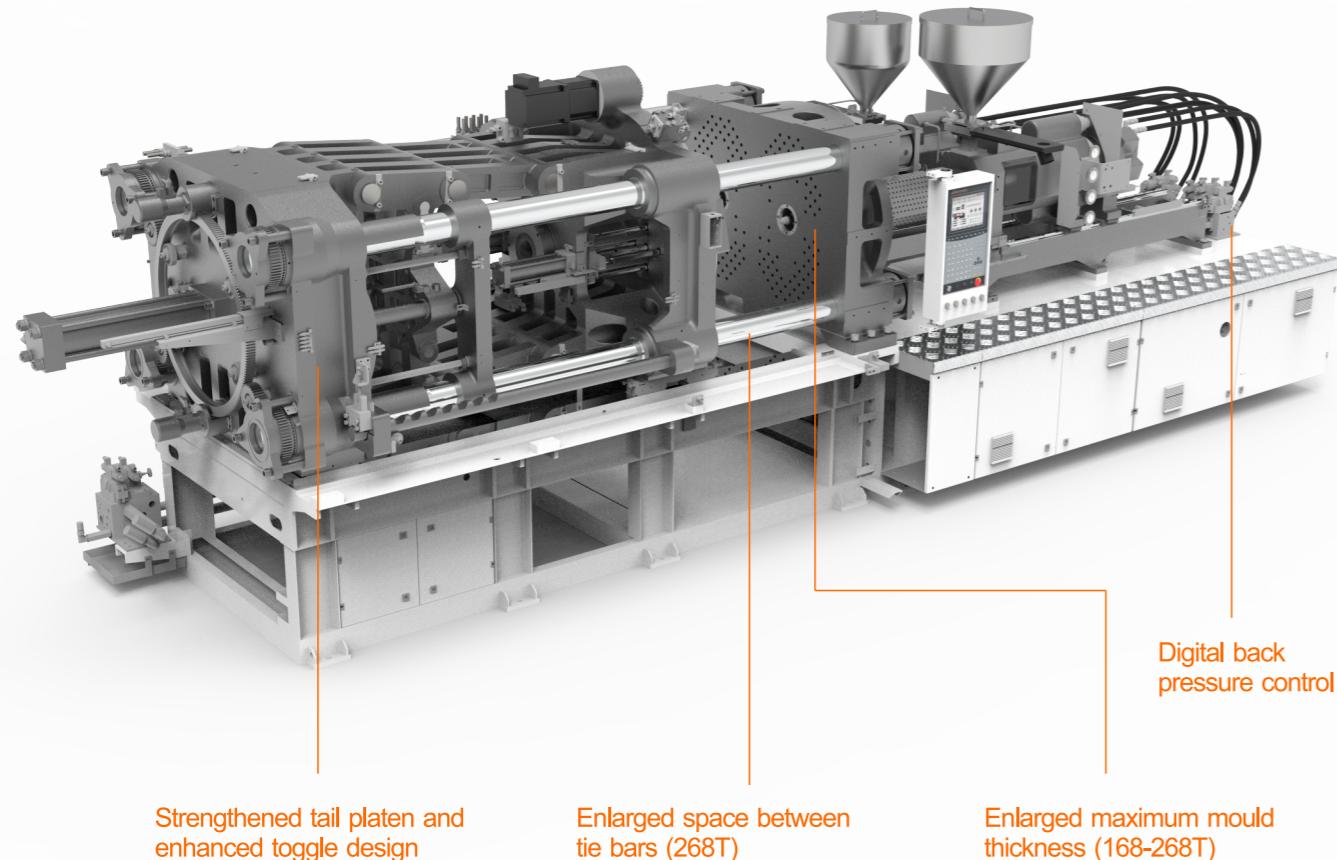

Proprietary relief mechanism on the injection units prevents rotational motion on the injection cylinders, effectively maintaining precision and increasing part yield.

	DM III	Competition A	Competition B
Injection Cylinders	Patented relief mechanism	Regular design	Regular design
Pros/Cons	No oil leaks, higher precision, higher yields	Tough tolerances, easy oil leaks	Tough tolerances, easy oil leaks

Reliability at the core Five professional components

01 Professional Specification Upgrades

02 Professional Turntable Cooling Structure

Good cooling performance is vital towards multi-mat production and high yields. The DM III boasts the best cooling structure in the industry with Teflon piping that can withstand temperatures from -50°C to 160°C.

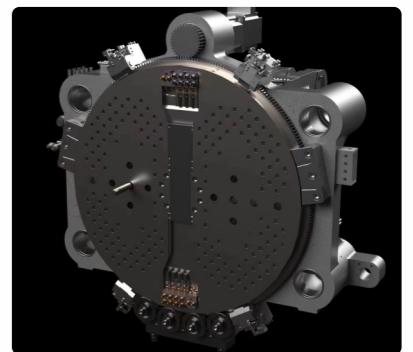

Model	JM168-DM III	JM268-DMIII	JM398-DM III	JM568-DM III	Competition
Cooling Channels	1 in 1 out	1 in 1 out	2 in 2 out	4 in 4 out	1 in 1 out
Diameter	DN10	DN10	DN10	DN10	DN15
Material	Steel-meshed high-temperature Teflon			Regular rubber, not resistant to high temperature	

03 Professional Turntable Fixing Mechanism

Quality (and yield) of a multi-mat part is only as good as the precision and repeatability of turntable positional control. The DM III, with its unique mechanical + hydraulic fixing mechanism, ensures perfect alignment during every cycle. That's precision you can count on.

DM III	Competition A
Mounting	Behind turntable
Pros/Cons	No adjustments needed. Does not obstruct turntable
	Regular adjustments needed. Obstructs turntable surface

04 Professional Linear Guide Rails

- Silky-smooth** – low friction
- Precision** – better control and accuracy leads to higher precision
- Fast** – low friction enables higher speeds and better control
- Reliable** – longer usage life
- Stable** – higher positional accuracy for higher yields

05 High-Strength Machine Base

Improved structural stability, reduced deformation and enhanced torsion resistance from thicker and stronger I-beams that make up the machine base, plus an optimised design created through high-end computer stress simulations of various loading conditions.

Smart And Intelligent Professional controllers

01 Gen-3 Proprietary Multi-Mat Advanced Controller

Rotational and related auxiliary motions of the turntable are controlled by a professional, multi-mat-dedicated controller on the DM III, with proprietary advanced algorithms and real-time dynamic adjustments to yield unparalleled repeatability and positional precision.

01 Smoother motion

02 Higher positional precision

03 Higher yields

02 Gen-3 Multi-Mat Advanced Control System

Featureful, Expandable, Professional

Professional features:

- 01 Dedicated buttons for multi-mat operations
- 02 Ample input/output channels for most application needs
- 03 Professional E502 modules for high-precision and stable temperature control

Advantages:

- 01 Ultra-fast CPU scan time (<0.5ms), barrel temperature < ±1°C (heat up overshoots < 3°C)
- 02 Separate isolation between independent electrical components ensures operational stability and precision
- 03 Freely-remappable input/output channels
- 04 High-speed digital control bus for fast responses, high precision and easy expandability
- 05 User-friendly HMI with easy-to-use UI

Easy, Versatile, Standard

01 Ease of Setup

CANbus expandability makes it a snap to connect and control auxiliary equipment

02 Multi-Mode

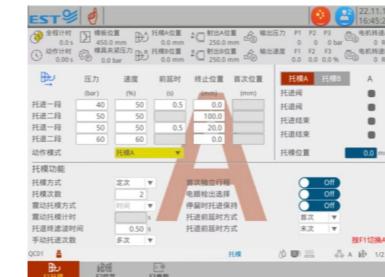

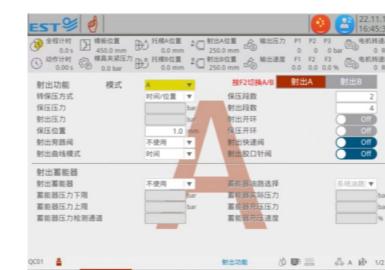

A wide range of injection modes to satisfy most application needs

03 Industry-Standard EtherCAT

High-speed high-precision all-digital control bus

High-speed high-precision all-digital control bus

	DM III	Competition A	Competition B
Mechanism	Servomotor	Hydraulic + mechanical	Hydraulic + mechanical
Pros/Cons	Fast, precise, reliable, easy	Less reliable, lower precision	Less reliable, lower precision
Controller	1. Easy custom programming 2. Built-in networking port (RS232 & Ethernet) 3. Support CAN & EtherCAT protocols 4. 64xDO, 48xDI, 8xAI, 8xAO with room for expansion	1. Difficult to program and enhance 2. Similar to DM III 3. 56xDO, 48xDI, 6xAI, 8xAO	

Injection Modes:

- 01 A-only
- 02 B-only
- 03 A+B
- 04 A then A+B
- 05 B then A+B
- 06 A then B
- 07 B then A

Ejection Modes:

- 01 A-only
- 02 B-only
- 03 A+B
- 04 A then B
- 05 B then A

Higher Yields at Your Fingertips

High-precision injection control enabled by EtherCAT control bus

Part: Lighter Enclosure

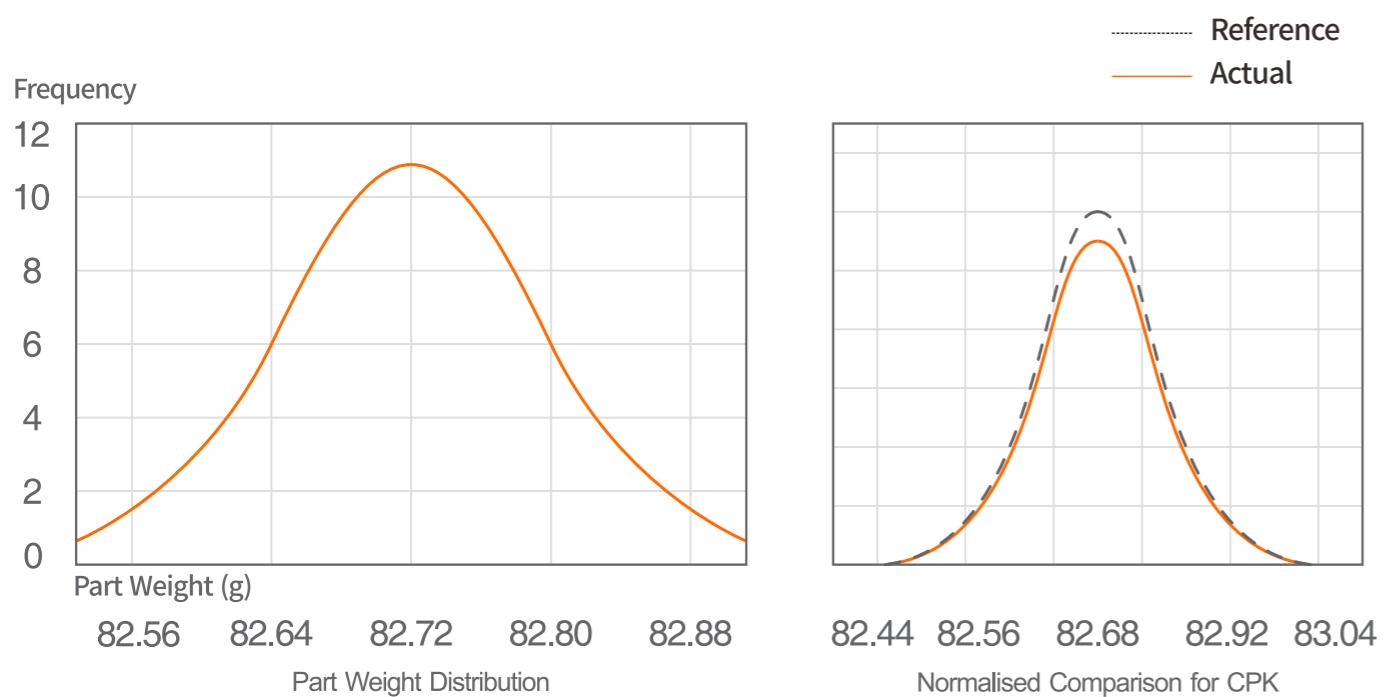

Resins: ABS + TPE

Cavities: 2

Part Weight (g): 82.7g

Part Specs: 240mmX37mm Wall thickness 3mm

Highly Responsive Dynamic Injection Control ($\pm 2\%$)

Wide Adaptability – A Machine for All Seasons

Perfect for all applications in diverse industries, meets all needs
